

Do Not's

To care for your new bed in the correct way and ensure you do not invalidate the guarantee, please be aware of the following:

Do not bend or fold the mattress

This is likely to damage the spring unit and will invalidate the guarantee.

Do not overload drawers

The weight of items stored in the drawer must not exceed 7kg, and should be spread evenly. Excessive weight or over filling the drawers can restrict movement or damage the drawer.

Do not use chemical or detergent cleaners

Should the mattress get dirty, rub lightly with a sponge using a weak solution of soap and water. We do not recommend using chemicals or detergent as this may damage the mattress fabric and fillings.

Do not use the headboard

to move the entire bed

Do not remove the fire label

Do not sit on the edge of the bed for prolonged periods

Do not kneel or stand on the bed

Guarantees

Myer's will repair or replace any mattress or divan base, if it should prove unsatisfactory through defective material or sub-standard workmanship, under the appropriate time frames.

A record of your guarantee is printed on the fire label.

Myer's reserve the right to refuse repair or replacement in circumstances where a new Myer's mattress has become defective due to use on an unsatisfactory or second-hand base, or is in an unsanitary condition.

Headboards are guaranteed for one year.

For service under this guarantee please contact, with proof of purchase, the store where you bought your bed. They will thoroughly investigate.

After carrying out their inspection, if they identify a fault in materials or workmanship, the store will arrange for the faulty item to be returned to Myer's for repair or replacement.

If identical materials are not available, or if a particular model is no longer in production, Myer's reserves the right to use alternative similar materials or substitute a current model. In particular, Myer's are unable to ensure that divan and mattress covers will match after stocks of covers are exhausted.

Following replacement or repair, the guarantee will remain valid from the date of the original purchase.

This guarantee is valid in Great Britain and Northern Ireland only and is in addition to your statutory rights.

MYER'S[®]
Comfortable beds

Care instructions and Guarantee

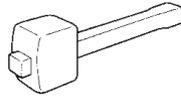

Please read these instructions before using your new bed

Installation

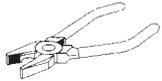

Tools required

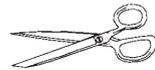

Slotted Screwdriver

Mallet

Pliers

Scissors

To avoid the risk of injury it is recommended that 2 people put the bed together.

Packaging disposal

Remove all polythene protective packaging and dispose of carefully to avoid any possible injury to children. Please remove any loose staples carefully with pliers and dispose of safely.

Airing a new mattress

Once you have removed your mattress from its packaging, allow the mattress to breathe in a ventilated room for four hours.

Mattress size

During storage and transit the mattress could become compressed, once opened the mattress should go back to its correct size within a couple of weeks.

Myer's luxury mattresses are made to metric sizes, please refer to the National Bed Federation website for information about sizes and tolerances. www.bedfed.org.uk

Castors/Legs

Attach castors by pushing them firmly into position by hand and give them a sharp tap with a mallet. Do not use a metal object as this may damage the castor or base. Legs need to be screwed in and checked regularly for tightness. The feet and headboard bolts can be found either in the drawer or attached to the underside of the divan base.

Connecting bases

Connect the two halves of double divan bases using the plastic linking clips situated on the inside of the bases. The plastic clips can become slightly compressed during transit so you may need to carefully open the plastic clips by hand.

Attaching headboard

The headboard may be attached to either end of the divan base. To fit the headboard to the divan, you will need to pierce the divan fabric with scissors to accommodate the headboard bolts. The approximate location of this is marked on the divan. Screw tight to secure the headboard in place and check regularly for tightness.

Using a suitable base

We recommend that a Myer's luxury mattress should be used with a Myer's divan base, however if you wish to use the mattress on another base, you should always be sure that the base is fit for purpose, otherwise it could damage your mattress, which in turn would make your mattress guarantee invalid. If you are using with a slatted base, the spacing between the slats should be no more than 63mm and the slats should be no wider than 63mm.

Do not use your mattress on solid plywood or hardwood as this would restrict ventilation and cause deterioration on the underside of the mattress.

Caring for your bed

Getting used to your bed

Your new bed may feel a little strange at first and different from what you are used to sleeping on. Don't worry, you just need to give it some time to adjust and for the fillings in the mattress to settle.

Turning your mattress

Myer's mattresses use generous layers of the finest upholstery materials which may take longer than inferior quality beds to settle evenly. The settlement will first be evident in the most common sleeping positions; this is quite normal and should not concern you. Turning or rotating your mattress is the equivalent of plumping up your cushions.

Mattresses should be turned over or rotated every two weeks for the first six months and at monthly intervals thereafter.

Cleaning your mattress

Dust can be removed from your mattress using a soft brush, we do not recommend using a vacuum as this will disturb the mattress fillings.

Discolouration

The chemicals used for fire retardancy may sometimes react with other chemicals such as deodorants and perspiration, causing discolouration. This is completely harmless and will not affect the performance of the mattress.

Protecting your mattress

We recommend the use of a mattress protector to help prolong the life of your mattress.

Airing your mattress

We recommend you leave your bed to air for 20 minutes every morning to allow body moisture to evaporate.
